Commodity Futures 25-26

Hogs / Pork

- Hog slaughter last week was 2.262 million head, lower than the normal rate of slaughter for a full week but still as much as 6.6% higher than a year ago.
- Government shutdown has not affected price and supply reporting from AMS but the shutdown has significantly limited other pieces of information.
- Export figures and cold storage inventories will not be released if the government shutdown continues.
- Pork cutout values have been soft despite the holiday shortened slaughter, largely due to very weak prices for loins and hams..
- Pork belly prices have surged higher, one of the few items that continue to perform very well.

Broiler / Chicken

- The USDA broiler hatchery report, which provides an update on the number of eggs and chicks placed, has not been updated since December 19. The report will not be published due to the lapse in government funding.
- Broiler slaughter in the six weeks ending December 29 was down 2.9% compared to the same period a year ago.
- The decline in slaughter has helped shore up prices for a number of chicken items. Chicken breast prices are up as much as 15 cents per pound and prices for whole birds, both fryers and roasters, have increased sharply in recent days.
- With ample supplies of beef and pork trim, prices for MSC remain steady at this time.

Cattle / Beef

- Total cattle slaughter last week was estimated 520,000 head, 4.6% lower than the same week a year ago.
- Winter storms in the second half of December negatively impacted feedlot conditions and forced packers to pay up to secure supplies.
- Prices for steak cuts, especially ribeyes, remain well above year ago levels on strong foodservice and retail demand.
- On the other hand, increased competition from pork and chicken appears to have negatively affected the value of rounds and ground beef. Prices have declined in the last few days when normally they move higher during this time of year.

Turkey / Other Poultry

- Turkey slaughter in the six weeks ending December 29 averaged 1.7% under year ago levels.
- Despite the reduction in slaughter, turkey prices have been for the most part steady. Whole bird prices should be near annual lows at this time. Normally whole bird values stay flat between now and mid February and then slowly start to move higher.
- Turkey breast meat values are higher than a year ago but have been steady for the last three months. Low ham prices have made for a very competitive environment in the meat deli case and helped keep turkey breast prices in check.
- MST prices should be significantly higher in Mar/Apr.
