**Steiner Consulting Group** 

### **Pork Market Trends:**

- Pork production was lower this week as extremely cold temperatures forced a number of packers to shutter plants on Wednesday and Thursday.
- Funds appear to have trimmed back some of the positions they took in anticipation of ASF fueled export demand. So far pork export demand has been weaker than expected while pork production has exceeded expectations.
- According to USDA pork production year to date is up just 0.7% but that is due to an extra production day a year ago. Average pork production in the five weeks ending February 2 was 4.2% higher than a year ago.
- Higher production, an increase in bacon prices at retail and lower forward prices have caused pork belly prices to decline.
- Easter is later than usual this year, which means users have more time to accumulate product, contributing to weakness.

### **Chicken Market Trends:**

- We still do not have visibility as to broiler slaughter. AMS estimates show broiler slaughter in the last four weeks up 3.6% compared to a year ago but we expect this number will be revised lower when actual data becomes available.
- Chicken prices have stabilized and some items have benefited from seasonal demand. The price of chicken wings has jumped 22% in the last four weeks on smaller than expected supplies and Superbowl party demand.
- On the other hand prices for drumsticks and thigh meat remain weak. The strong US dollar remains a critical factor for US chicken exports going forward.
- The price of boneless/skinless breasts has recovered as much as 20% since last fall but it remains below year ago levels. Breast meat prices should be seasonally higher into the spring, especially if producers follow through with their intention to trim supply growth.

### **Beef Market Trends:**

- While winter weather has been negative for the pork market, it is bullish for cattle since cold weather tends lower carcass weights and ultimately beef production.
- Feedlots continue to struggle with very poor pen conditions. Packers continue to find it very difficult to secure cattle in the current market.
- Beef production in the five weeks ending February 2 has been a total of 2.465 billion pounds, about the same as a year ago.
- Cattle and beef prices remain very firm in the near term due to limited supply growth and strong demand in all channels.
- High value cuts from the loin and rib remain 7-10% above year ago levels. On the other hand, rounds, chucks and trimmings are currently near or below last year.

### **Turkey Market Trends**

- Turkey slaughter in the last four weeks has been down an average 7.9% compared to the previous year. Producers continue to contend with weather disruptions and logistic problems.
- Despite lower slaughter prices in the spot market remain steady. Spot prices for whole birds as quoted by USDA are hovering around 82-83 cents while other market sources have whole bird prices a few cents higher than that.
- USDA has not given a date yet regarding the release of the next cold storage report. Latest cold storage data is for November 30.
- Breast meat prices continue to trade steady. Seasonally we should see breast meat prices start to move higher in late March or April. Sharp discounts for hams and lower prices for round cuts have made it more difficult for turkey breast to compete in the retail deli case.
