Pork Market Trends:

- Pork market remains well supplied in the very near term. Pork cutout last week was under \$60/cwt, the lowest price in a decade.
- Weather disruptions caused slaughter to be smaller than expected last Monday but producers appear to be relatively current at this time. Slaughter should start to slowly decline in the next few weeks but still be about 2% higher than a year ago.
- Pork belly prices seasonally trade sideways in March and early April but should be substantially higher in May and June.
- Ham prices improved modestly due to the lower slaughter and seasonally better demand for Easter. Once Easter needs are covered prices are expected to settle back down. US and Mexico are working on removing steel and pork tariffs. This could push prices higher in late spring and early summer.

Chicken Market Trends:

- Chicken producers managed to reduce slaughter levels in January and February, which in turn has helped support prices for parts. Retail features helped support whole bird prices in January but the rally was short lived. More features in the spring should bolster whole bird prices but for now prices are very weak.
- Chick placements in the last four weeks have averaged about 2% above year ago levels, which should lead to some supply growth in March and early April.
- Prices for boneless/skinless breasts have improved modestly in recent weeks, supported in part by cutbacks in supply. Seasonally prices should be higher in March and April but ample meat supplies and strong competition at both retail and foodservice will limit the seasonal price increases. MSC prices should remain steady in the near term. Expect higher thigh meat prices in April and May.

Beef Market Trends:

- Futures continued to gain last week on expectations that packers will eventually be forced to pay higher prices for cattle into March.
- Fed cattle slaughter last week was almost 2% lower than a year ago. We think that fed cattle weights are lower than what USDA is reporting, which suggests that beef production for the week was down as much as 3% vs. last year.
- Seasonally lower beef supplies and retail preparations for more features in March and April should support beef prices in the near term.
- The semi-annual cattle inventory report suggests that US beef production will continue to increase well into 2020 but the rate of growth is only enough to keep up with population growth. Hence, beef prices in the US are expected to be near year ago levels this year and likely will be higher in 2020 and 2021.

Turkey Market Trends

- Turkey meat supplies remain very tight. Slaughter since the start of 2019 has averaged 7.4% below year ago levels.
- Producers continue to struggle with weak demand for whole birds. Whole turkey inventories were 7% higher in December when normally they decline as they are used to support holiday features.
- Breast meat inventories at the end of the year were only 5% higher than a year ago but well below summer levels.
- Seasonally turkey breast prices are steady in Q1. However, the continued reduction in slaughter has limited availability in the spot market and prices have gained ground in recent weeks. Turkey breast prices are now as much as 35% higher than a year ago.
- Prices for MST remain steady due to ample supplies and lower prices for beef, pork and chicken alternatives.

Last February 26— 28th, **Andes Global Trading** attended one of the most important shows in the meat industry: **Expo Carnes y Lacteos 2019** in Monterrey, N.L., our stand was visited by clients and suppliers by Mexico, United States and Canada.

Expo Carnes y lacteos 2019, was the perfect environment for the company, to launch numerous products of its own brands: **Delicias del Dia and La Carbonera**, which were enthusiastically received by the local market.

A special thank you to our visitors and we look forward to seeing you all this week in Guadalajara at Expo Antad, #750.
