#### Pork Market Trends:

- Hog slaughter last week was well over 2.6 million head and the latest USDA inventory survey indicated that we should expect slaughter over 2.7 million/wk in late October and November.

- Pork supplies during Q4 should be as much as 5% higher than a year ago due to both more hogs on the ground and a notable increase in carcass weights.

- Futures continue to maintain a premium for hogs in Q4 despite very weak spot market prices on speculation that China will be a big buyer of US pork ahead of the Chinese New Year. Some reports have suggested China is getting ready to purchase an additional 100,000 MT in the next few weeks.

- Current attractive belly prices and fear of future inflation helped bolster short term demand. Loin prices remain weak while hams could get some seasonal support in October.

#### **Chicken Market Trends:**

- Chicken market remains under pressure, in part due to ample supplies of competing proteins. Beef production in Q3 should be the highest for the year and pork supplies are at all time record levels.

- Retail chicken products are especially weak. Boneless skinless chicken breasts according to USDA are currently at around 90 cents per pound but private sources suggest prices are even lower. These are all time record low prices.

- The price of whole birds is also very weak at this time as both rotisserie chicken demand and fresh product demand has struggled.

- Despite weak pricing, many chicken producers have been reluctant to slow down production. Some of the hope that the spread of ASF in China will result in better chicken demand. In the last four weeks chick placements in incubators were up 3% y/y. Egg sets were up 3.9%.

#### Beef Market Trends:

Choice and select beef prices have declined in the last two weeks as beef production remains near year ago levels and high prices appear to have rationed out some retail demand.
Ground beef prices at retail have been trending down and the weaker demand is reflected in the lower prices for 50CL beef, which is currently about 20 cents lower than two weeks ago and about 40 cents lower than at the end of August.

- Prices for beef round cuts were especially strong in September, largely because of previous packer commitments to regular users. However, it appears that market is slowly correcting as well.

- Beef export business has been fairly weak in the last two months while beef cold storage supplies are increasing. This should help limit beef price inflation in the near term. Lower placements in August imply more upside risk for February.

#### **Turkey Market Trends**

- Turkey supplies into Thanksgiving are expected to be well below year ago levels. The reduction in supply has helped bolster prices for some products, especially whole birds. However, prices for other items, especially MST, remain weak due to increased competition from other proteins.

- August poult placements were down 2.7% from a year ago and placements in during Jun-Aug were 4.4% lower than a year ago and 4% lower than the five year average.

- The market for boneless skinless turkey breast remains steady. Ham values have been relatively low and deli demand so far is lackluster. Seasonally prices should be higher in Q4 but any price gains will likely be muted. We expect prices to be higher in 2020 but the degree of price inflation will depend greatly on the outlook for pork prices in general and especially on ham prices.
