### **Pork Market Trends:**

- Hog slaughter is now back to near full capacity and it is expected to run at +2.6 million head per week through March.
- Ham primal remains extremely volatile, in large part due to the way in which USDA calculates the value. Bone-in ham prices have pulled back modestly but good demand from Mexico continues to support prices above 60 cents per pound.
- Easter will be earlier than usual this year and with fewer hams in the freezer processors have limited time to accumulate inventory for the holiday.
- Belly prices are steady to higher in the near term. Expectations of price inflation in Q2, expected better foodservice demand and limited freezer inventories have all encouraged buyers to try an buy on any breaks.
- Market for pork butts and picnics is soft in the near term but higher prices are expected in Q2.

#### **Chicken Market Trends:**

- US broiler producers are trying to keep supplies in check and bring a margin back in their business. Sharply higher feed costs have made this an imperative goal.
- Weekly broiler slaughter since October has averaged 2.3% below year ago and yet the hatchery flock on December 1 was 4% above last year. Clearly producers are trying to keep the production base in place until demand starts to recover.
- Rising feed costs have significantly complicated the situation for a number of large broiler producers. Grain hedges will continue to help them in the near term. But with \$5 corn and \$400 soybean meal, higher prices are needed or producers till cut back until market recovers. Expect higher prices for broiler meat this spring and summer.
- Chicken sandwich promotions from large fast food chains and seasonal demand recovery in Q2 should drive chicken breast prices in the next few months.

### **Beef Market Trends:**

- Prices for chucks and rounds are trending higher, which is not unusual for this time of year. Retailers are looking to feature inexpensive beef cuts during the cold months and low prices at the end of December offered the opportunity to book beef for January features.
- The price of 50CL fat beef trim has increased the past two weeks but remains relatively weak due to still heavy cattle in feedlots and higher slaughter. Weak foodservice and school lunch demand is keeping prices weak as well. Expect much higher prices in Q2, however.
- Beef export demand remains robust, in part because China has now become a much more regular buyer of US beef and it is often the second or third largest buyer.

#### **Turkey Market Trends:**

- The main challenge for turkey producers in the near term is breast meat. For a long time this was a key demand driver and became the most valuable part of the bird. Lunch hour demand at fast food restaurants remains weak as more people work from home and turkey breast meat prices are soft.
- Until breast meat market recovers, producers will continue to keep a lid on production. Weekly slaughter in the last three months has averaged 6% below year ago levels.
- Reduction in slaughter and improved export demand is helping prices for some items. Prices for thighs were higher last week and the value of MST product is now as much as 15% higher than a year ago.
- Higher feed costs are inflationary for turkey products as well as producers will further limit supply given deteriorating margins.
